

BURROW IBNS (IMPROVED BEDNET SYSTEM)

BRIEF

The **Burrow's** instant deployment and cot compatibility make it an efficient, fast-access shelter to protect soldiers from insects and a great shelter for medical patients in the field. It is EPA registered and has Permethrin bonded to the material for insect repellency. The Burrow is supported by a strong and ultra-light .134" diameter pultruded fiberglass rod which winds through the shelter, expanding it to its given shape. When the rolled up Burrow's cinch strap is removed, the shelter is released and snaps into shape automatically. No assembly or set-up is required.

The **Improved BedNet System (IBNS)** was originally designed to fit securely onto a military cot with webbing and side release buckles on all four corners. After initial fielding, we were informed that soldiers liked the product so much that they were deploying it in the field as well. In response, we ruggedized the design and added the capability to add a rainfly. We have since delivered hundreds of thousands on contract. After yet another round of improvements, we are proud to re-introduce the Burrow™ IBNS with enhanced capability, more user friendly features, and improved parts and fittings.

NSN: 3740-01-543-5652 - Burrow IBNS Coyote Brown - Import or Berry

98600 - Coyote Brown Import

98627 - Coyote Brown Berry Compliant

SPECIFICATIONS

Sleeps: 1

Weight: 1.9 lbs. // .85 kg
