

WOLVERINE EBNS

BRIEF

One of Catoma's most popular and prolific products is the Wolverine EBNS, formerly known simply as the EBNS. The greatest feature of this rainfly is its spacious dual vestibules. The Wolverine features dual doors; the entry side door opens wide to allow easy entry, and the storage side door offers a wider vestibule for storing a full size pack with room leftover. At the heart of the EBNS is the Burrow IBNS, a permethrin-treated inner body that can be used on a cot or directly on the ground. The materials are at or exceeding mil-spec across the board. At less than 5 pounds with all accessories, this lightweight single man shelter is rugged and versatile.
